.exe, VirtualDub Pro Full DownloadTag: trains This should be a nice and easy surprise for the reader who has been following me for a while. It is a reverse-engineering project, starting with how it is made and ending with how to make one yourself. It starts with the idea of the 'de-pipeline' concept. The idea comes from the Nuremberg Ruhrkunde, an amazing collection of old railway designs and proposals, for the Nuremberg U-Bahn, and Nürnberg-Dycker. This allows for a more direct comparison with the current v20, ... Tram track 1: Electric train width and parameters The minimum width of the track should be 8,5 cm in order to use electric rolling stock, at least this is what according to the original regulations. The width of the track should be no more than 12 cm, this means no wider than the width of the tram carriage. If the tram carriage is wider than 12 cm, there will be a gap between the tram and the rail. In this case, one might think that the gap would be large enough that the tram could ... A transit-connection strategy for transit-choking cities I am planning on publishing a lengthy post about how to improve transit in the St. Louis region. Part of that will be a series of pictures, which is what I want to cover here. This is mostly a pictorial document showing what a tram system would look like, but it also includes plans for an LRT network. The main problem with our LRT/streetcars and street plans is that they all follow the same design from start to finish, and ... Tram track 3: Step and main line widths The minimum width of the step must be between 4 and 5 cm, in order to safely handle a hand brake, while the main line must be between 8 and 10 cm in order to safely operate a train. This is a standard from the Nuremberg Ruhrkunde, which allowed for a no-hand-brake express tram line in the city of Nuremberg. While the main line width of 8 cm is appropriate for a tram, the width of 4 cm is too narrow for a realistic future. A tram ... This invention relates generally to an improved floating dock and, more particularly, to an improved floating dock having a self-ballasting float which is uniquely located with respect to a central, through-
