So, why not give it a shot today?Q: How to configure Azure Application Gateway for RDP? I've got an Azure VM with RDP access and an application gateway assigned to it. For internal traffic to the VM I have a NAT rule allowing traffic to the 172.20.10.0/24 range to get through. However

for internet traffic (so for example, to the gateway should let it through. This seems to be the behaviour that I'm seeing, but I'd like to confirm that this is the intended behaviour. Does the application gateway apply a different set of rules to incoming vs out 2d92ce491b
