See what movies are out, when they came out and watch trailers. The Indian Space Research Organisation (ISRO) on Monday launched its first lunar mission Chandrayaan-1 by a Ukrainian-built Geosynchronous Satellite Launch Vehicle Mark III (GSLV Mark III).The unmanned moon mission had begun a soft-landing manoeuvre on the Moon's surface on August 14 and is expected to reach the lunar surface by September 13.The project will help in understanding the evolution of lunar surface and check the extent of water present on the Moon.The Chandrayaan-1 launched from the

spaceport at Sriharikota in the southern state of Andhra Pradesh and the spacecraft is expected to reach moon's orbit in a couple of days and begin a series of manoeuvres to lower its orbit to around 100 miles above the lunar surface. All this means "India has found a solution to the long-standing problem of communicating with the moon" a scientist said. Observers on Earth say they have seen three bangs in the spacecraft's propulsion system which means it's sending images back to Earth. The space agency tweeted the images Tuesday. NASA: Chandrayaan-1, India's unmanned moon mission, has successfully entered Lunar orbit, as per current plans. GPRS signals are being detected from the lander and it's also sending telemetry back. Oct 1, 2015 Chandrayaan, the first mission of the Indian Space Research Organisation (ISRO), has successfully completed its first manoeuvre to an elliptical orbit around Earth and is now in a higher orbit around the sun. The spacecraft was launched from Sriharikota in Andhra Pradesh's coastal Srikalahasti district on July 22 and is expected to reach d4474df7b8
