

windows 10 Professional enter? hi, im currently using corel cad 20, with keygen product key for windows 10 pro. i will be getting a new laptop and i will need to install corel cad on it, i was wondering if i could use my current keygen product key for windows 10 pro if i reinstall it on a new laptop. do you think it would work. any help would be appreciated thank you A: You could attempt to use the product key with the new system. Please note that you will need to do a repair installation if you ever need to reinstall the system, as windows will remove the product key from the registry if you do not install it as part of the OS installation. You could also use the product key to activate the software on a system with the correct version of windows 10. Q: Rails - Dropdown box not submitting I'm trying to create a dropdown list box and when the user selects the option from the dropdown box, it will populate an email address in the form and if it doesn't populate the email address, it will submit the form. My first try was just to have this in my form: But when I go to the page, it doesn't populate the field with the selected value. I then tried this: 'Select' %> And it worked, however when I tried to submit the form, it didn't work. I've tried putting this into my controller: if params[:email] == nil ... end And also tried: if params[:email] == "" If I try: if params[:email] == "null" It doesn't return any errors, but it doesn't submit the form. This is my first time posting a question on here, so any help is much appreciated.
