Its software is primarily used by engineers, architects, and other designers. In this article, we will learn what is AutoCAD and how to use AutoCAD to create 2D drawings. Why Choose AutoCAD? The world is looking for 2D CAD software that is cheaper and easy to learn for beginners. So, what makes AutoCAD stand out from the rest? AutoCAD can do almost everything that can be done in other 2D CAD software, but the following are some of the reasons why many people choose to use AutoCAD: Cost. AutoCAD is a very low-cost CAD package. A single user license for AutoCAD Classic can cost less than \$200. This is as compared to other commercial CAD software packages, which can cost thousands of dollars. In addition to the single user license, you also get additional items such as a CADDie, ExpertDraw, Scientific, WebEssentials, and Inspire for AutoCAD. Intuitive. AutoCAD is very intuitive. While other 2D CAD software is complex, AutoCAD is simple. Since AutoCAD is easy to use, anyone can create drawings without any training. Exclusive. AutoCAD is a closed-source package. While open-source software is free and has no limitations, closed-source software is only available through the sale of a license. The AutoCAD software is sold through its official website and through the authorized distributors. You can also buy AutoCAD via the cloud. Responsive. Unlike other CAD packages, AutoCAD works well on low-specification hardware. In fact, AutoCAD Classic and AutoCAD LT will run smoothly on most Windows and Mac computers. So, it is not uncommon for AutoCAD to work on old computers with the minimum requirements. 2.1.1 History of AutoCAD AutoCAD was released on December 29, 1982, by

Astronaut Gus Grissom May Have Sailed On Original Space Balloon From England The aircraft that transported the first humans to space was just a British-built prop balloon, the Skua, that was bought second-hand in the United States and flown into space on behalf of the U.S. government. Gus Grissom, a scientist and test pilot, was piloting the first manned flight, piloted by Ed White, when their balloon, the White Sands Test Range Skyhook, lifted off in the New Mexico desert in February 1961. The balloon and crew reached the altitude of 110,000 feet on February 20 and they had to eject over the Pacific Ocean before landing in South Africa. But the record for first human into space was set by the Soviet Union's Vostok 1 in April 1961, just five days after the U.S. Skyhook. My parents knew that British propaganda was used to conceal the nature of the Soviet's space program. I didn't until I read this book. The footage in this book is very well done and captured the excitement of the mission and time period. To be able to watch Gus and Ed White in space was quite an experience, not to mention the footage of their ejection. I really enjoyed reading about the history and how things have changed since the first space flights. I will definitely be checking out some of the other books that Karen wrote and it was a great trip down memory lane.
