Windows Presentation Foundation and Windows Forms At Autodesk University 2007. Autodesk's corporate vice president Paul Crowe stated that "Autodesk's WPF technology is going to be the de facto technology for creating 2D and 3D graphical user interfaces for our product lines." On October 25, 2008, Autodesk announced the acquisition of AliasWavefront, Inc., a company that developed the open-source 3D graphics development platform WinForms. The move was the first major purchase of an open source developer by a software company. The acquisition was expected to expand Autodesk's ability to offer customers software that uses advanced 3D graphics technologies. Autodesk's stated goal with the acquisition was to add high-end 3D capabilities to its product offerings. The WinForms acquisition was rumored to have been the impetus behind the move from Portland to San Francisco by Autodesk. According to the company, Autodesk Portland offered too little opportunity for growth and had become a "distraction". Autodesk CEO Gary Reis said, "We can no longer build tools for customers that are good enough, so we have to break the rules and build tools that are great." Reis announced Autodesk's intention to build on the success of the existing WinForms technology base, by integrating it with Autodesk's 3D capabilities. The company said, "This integration of 2D and 3D technologies means that Autodesk can offer new capabilities in our product lines. We are now in the business of building solutions to our customers' business problems." On October 11, 2009, Autodesk announced it would be replacing WinForms with WPF in its line of integrated applications. Applications Autodesk offers a number of different applications, including 2D and 3D applications, which may be used for architects, engineering, construction, facilities, manufacturing, aerospace, architecture, construction management, and interior design. As of December 2011, Autodesk offerings included: Autodesk AutoCAD - software for 2D and 3D (mixed and architectural) drafting, design, and construction.
