Today, people use many applications to manage data and organize tasks. Most of them have a Graphical User Interface (GUI) and come with ready-to-use solutions that make things easy for you. But some are limited and need a lot of configuring to make them work. Exhibitor is a free Web based application that you can use to create and maintain a database of people involved in a specific exhibition. It's a Web based application (software) designed for displaying a Web page to a Web browser. It's also possible to access it using a graphical client, via FTP, or even just from the browser. Quickly, it lets you add text fields and images to the web page. It also provides you with some nice graphic tools to select, paste, resize or

crop. Exhibitor is a very nice solution to manage data. How to use: Exhibitor can be used in many ways. Either directly from the Web, via FTP or even just from a browser. It's also possible to build a Web page with Exhibitor and then use that page in a Web browser. One of the nice things about Exhibitor is that is very easy to use. Just type in its name, a memo and the date. That's it! The application will automatically create a database. It can be easily navigated and all of the fields and images can be easily changed or deleted. Data can be added, modified or deleted easily. Another nice feature is that you can easily publish the data in HTML pages and view the data from a browser. For example, you can create a simple database that lists your contacts in the database. You can easily manage and

store data like names, addresses, telephone numbers, etc. Exhibitor also provides you with a nice graphical editor with many tools at hand. Exhibitor also comes with standard commands, you can use these to integrate the data into a browser. It's also possible to save a data file that you can use later or to restore it. Features: Exhibitor is a free Web based application that you can use to create and maintain a database of people involved in a specific exhibition. It's a Web based application (software) designed for displaying a Web page to a Web browser. It's also possible to access it using a graphical client, via FTP, or even just from the browser. The application can be used in many ways. Either directly from the Web
