Is it possible to have an UIImageView, so that it shows a full screen (full screen) image, while scaling up the image in the corner (very zoomed in)? To do this, I would suppose I need to implement the CoreGraphics CoreImageFilter: "image-scaling" in my custom class. But I don't have any idea of how to do this. Is there another way to do this? A: Your solution is correct. There are lots of tutorials out there that do this. I just found the view you described when searching for "imageView fullscreen image scaling" in google and found this tutorial that should give you a good start. EDIT: it just occurred to me that you want to scale something down even more than the image view is currently doing? In that case, put the image view in a container (like a UIView or UIScrollView), and apply a radial gradient to the container to get a top, side and bottom border. Q: Git: Hiding a file from the git history I have a file and I want to commit it. But I want that file to be hidden from the history. In other words, I
