In this moment of global unrest, between the pro-people messages coming from the Catalan, Cymru, and Save Our Sea, and the desperate condition of the world's oceans and fisheries, we must find our path in this world and steer our economies to sustainability and well-being. The term "sustainable" was coined by 17th century Dutch economist Herman van der Wal in 1785. It is often translated as "self-sufficient," "assuring the quality of living" and "health-affirming." A hallmark of any sustainable economy is the elimination of waste, and a hallmark of a sustainable society is the strengthening of the commons - public spaces, human resources, and common goods - which creates opportunities and rights for all, regardless of social status, education, race, gender, or economics. Our definition of sustainability must also include the recognition that we are all interdependent beings. Our planet, whether we are aware of it or not, is one home - and we are all one 54b84cb42d
