You can't have a computer-literate life, or life at all, without good Wi-Fi. The difference between a network that's rock solid and one that drops you off at the local FedEx office is so slight that it's almost impossible to notice. Because of this, many users prefer to use the Ethernet ports on the back of their PCs instead of their Wi-Fi cards. The problem is, you need to be running Windows XP to use those Ethernet ports. If you're like many of us, it's time to drop Ethernet and embrace Wi-Fi. You can get a network that is almost as good as Ethernet for almost half the price. It's called Wi-Fi, and it's a Wireless Gigabit Ethernet standard. And if your PC has Wi-Fi and Windows XP, you're ready to configure a Wi-Fi network.
