Overview of PCBCS 3D Printing Solutions The most powerful 3D Printing Solutions in the world Dualtechnology-3D printing 3D printing is a rapid prototyping and manufacturing technology that converts a 3D CAD file into a material object layer by layer. Traditional 3D printing uses a filament (resin, metal, etc.) that is laid down to build a 3D object. 3D printing works by extruding the material, pushing it forward in a continuous layer. Dual technology-3D printing works by extruding a first material layer (typically plastic), which hardens and then a second layer of metal is added. The combination of materials can therefore make it possible to obtain objects with interesting surfaces made of metal and plastic. Consequently, dual technology-3D printing technology can make it possible to make some of the most elaborate objects without having to develop
