(this is due to the environment restrictions and the fact that I'm working without a real computer. all I have is a virtual machine with Python) I can correctly launch the server from the Python terminal using python manage.py runserver (this is on windows 10) But from Pycharm: the project is in this location: x:\programs\code\\ but it is launched from this location: d:\users\myuser\Documents\PycharmProjects\\\test if I change the working
