Freeware ODBC Drivers Manager offers an easy way to install ODBC drivers for your different databases. It allows you to easily and quickly determine which of the ODBC drivers installed on your system are working and which ones have stopped working. Freeware ODBC Drivers Manager is able to restore drivers that have stopped working and automatically search the internet for the latest version of the needed drivers. You can either directly select the database driver from the list, or search for the database type and select the appropriate driver, depending on the need. After the driver is successfully installed, a new line is added to the ODBC Data Sources list in the ODBC Data Source Administrator utility and the ODBC Driver Manager utility makes it possible to manage all the database drivers installed on your system. Advanced Automatic Database Updates for MySQL and Firebird allows you to configure the database system to automatically synchronize itself with a remote server. The software enables you to check the database for a certain number of minutes, and update the data base when the remote server is updated. This functionality can be used to perform an automatic update of the tables in your database. The updates are started after a specified number of minutes, as well as at certain time intervals. The program also enables you to set the number of remote server updates to be made, along with the check and update intervals. The software works with MySQL, Firebird and MySQL-ODBC, and is designed for both, Windows and Linux systems. Advanced Data Fax Connection is a freeware software that enables you to easily connect a fax machine to your computer. The software can be used to receive faxes from any fax machine and automatically print the received faxes in any fax application. Advanced Data Fax Connection is designed for both Windows and Linux systems, and it supports WinFax, Micralis, PutFax, Zebra Fax, Skanfax, Modus and other data fax software. It is also possible to customize the software by installing your own fax interface on the computer, which could be the remote fax machine or the Local Fax Service. Advanced Data Fax Settings is a freeware data fax driver that allows you to connect any fax machine to your computer. The software is designed to simplify the data fax process for all types of fax servers, as well as for the Local Fax Service on your computer. It provides a number of helpful functions, including automatic print of faxes received, receiving faxes directly from e

XmlQuery ODBC Driver for Access Description: Advanced Data Connectivity (ADC) for Access is a software solution designed to work with ODBC-based applications, enabling them to access both Microsoft Access and SQL Server databases from Access. The driver supports the Access Data Objects API, as well as the ODBC Data Source Administrator. Additionally, it is possible to specify the Access database location, and the software supports the following authentication methods: Windows logon, Active Directory, a password, or Integrated Windows authentication. ODBC Driver for Access is compatible with numerous third-party applications, including Visual Basic and Visual C++, SQL Server, VBScript, Delphi, Python, and PHP. Furthermore, it is possible to configure the connection parameters directly from the ODBC Data Source Administrator. When installed, the software enables you to create a new data source, which is the Access database you wish to connect to. Furthermore, you can specify its path, whether to use a temporary connection, and the connection options. With this information, you can create a new connection, and make the connection in a number of ways, such as selecting the Database Name, Host Name, and Port. The software supports the SQL Statement clause, which enables you to define the information you wish to enter into the connection, and it is also possible to set up login and password details. There are numerous ways to use the ODBC Driver for Access, including ADO, ODBC, ADSI, and the API. Detailed documentation is available, explaining how the driver can be configured and put to use. Once installed, you can set up the connection parameters by accessing the ODBC Data Source Administrator and creating a new data source. ODBC Driver for Access is the software that enables ODBC-based applications to connect to Access databases, which are a core component of both the Microsoft Office Suite and the SQL Server platform. Detailed documentation is available, explaining how the driver can be configured and put to use. Once installed, you can set up the connection parameters by accessing the ODBC Data Source Administrator and creating a new data source. Description: ODBC Driver for Excel Description: This product is designed to enable ODBC-based applications to connect to Excel databases. As well as supporting the ODBC API, the software supports Excel Data Objects, enabling you to work with Excel data. ODBC Driver for Excel is capable of establishing connections to Excel databases via HTTP directly, but it is also possible to provide a Proxy server address if it is required to connect to the network. Furthermore, the software supports Advanced Connection String parameters, and it is possible to define many connection options, including the database location, authentication mode, and encryption. With ODBC Driver for Excel, you can specify the connection options through the ODBC Data Source Administrator. Furthermore, once installed,
