Cork [Win/Mac] Latest

Description: Cork comes as a virtual keyboard for touch-enabled devices. It primarily aims to reinforce typing gestures on your Windows PC, and increase your efficiency. In addition, Cork's gesture recognition abilities can be used to offer you alternatives for writing, and typing programs. The application is especially useful for touch PCs, or ones that use on-screen keyboards. The application is not as flashy as the default operating system keyboard, but it still keeps up, staying on top of every other window, and

functioning as a mouse. The design is subtle, but that's not necessarily a bad thing. It does everything it can to improve typing speed, working on the fundamentals, and providing shortcuts which make everything easier. The Cork keyboard can be sent away, gently sliding off the edge of the screen. In addition, the tray icon can be used to bring it back up, and access several settings. Among these, you can, for example, alter your character set, or turn off sounds. The virtual keyboard also comes with a layout editor. However, the way it works means using it may take a little bit of time. The main idea here is to change the character set, as well as

buttons and their functionality. The first part of the layout editor is intuitive, but the second is… not so much. It's better to use the built-in alternatives. You can also make use of drag-and-drop to arrange the icon sizes, and the exact locations of buttons, giving you more control over Cork's desktop keyboard. Although the Cork keyboard doesn't come with a lot of options, it can be used to configure hotkeys. Furthermore, your computer can be used to launch programs, with this in mind. A visual designer also comes included, allowing you to alter colors, making Cork an even cooler keyboard. In the end, we can say that the Cork keyboard is not as flashy,

and dynamic, as the default keyboard. However, you can change almost everything, and add some extra tools. Cork Layout, & Skin Design: Layout & Skin Design: The Cork keyboard comes ready with a layout editor. However, using it may take a little bit of time, because of the poorly described elements. On the other hand, the application also comes with a visual designer. The skin designer can only be used to change skins, but it is a lot more flexible, and offers more options
