I will not be able to go on the new version if i did this. External links Steam006's website Category:Video game modification Category:Video game hacking Category:Video game development Category:Video game cheat codesQ: ArrayList only containing 1 Item So, I've created an ArrayList, and I'm populating it with some data via a class that extends java.lang.Object I've just noticed that only 1 of my actual Objects in this ArrayList, "count" is returning as having just 1 item in it. When I check the arraylist directly I can see that there are 2 items present, they just aren't being displayed by "count" Here's the code that populates the ArrayList: public class NotificationProcessor implements Runnable{ private final int iFrameId; private final int state; private final ArrayList notifications; private final int iNumberOfNotifications; private int iCount = 0; public NotificationProcessor(int iFrameId, int state, ArrayList notifications) { this.iFrameId = iFrameId; this.iNumberOfNotifications = notifications.size(); this.notifications = notifications; } public void run() { while (this.state == 0){ if (this.iNumberOfNotifications > 0){ iCount++; String notification = ""; StringBuffer notificationText = new StringBuffer(); for (String iNotification : this.notifications)
