What is AutoCAD? AutoCAD is a commercial 3D CAD package, similar to SolidWorks, Netfabb, and Enovia FreeCAD. It is a native 2D and 3D drawing application used in engineering, architecture, and construction. AutoCAD is software for designing, documenting, drawing and publishing 3D models. It is used in areas such as: architecture, construction, mechanical, electrical, plumbing, industrial and

communication design. Built on the foundation of Autodesk Architecture, Autodesk AutoCAD revolutionised the way that CAD was made and used. Autodesk AutoCAD R14 is the world's most popular software for designing in the classroom, in the office, and at home. It's trusted by more than 115 million people worldwide. AutoCAD is used for twodimensional (2D) drawing and three-dimensional (3D) modeling. It is a feature-rich and powerful program used by designers

worldwide. It is used in the following areas: AutoCAD is used to create 2D drawings. Building upon an easy-to-use interface, a user can draw and edit 2D architectural drawings, electrical, plumbing, and mechanical designs. Most common uses of AutoCAD are: Creating technical drawings and documents Creating drawings for architects Preparing accurate technical drawings to meet government regulations Creating and updating 3D models Creating 2D drawings for models Inserting

I am a client of theirs and was made redundant a few months ago. I'm currently filling in forms with other employers and I'm getting a lot of questions along the lines of: I have a Bachelor of

Commerce (majoring in Accounting). However, I want to pursue a career in finance/accounting instead. Are my accounting skills enough to land a role in finance? I am currently studying Accountancy at Sydney Uni. However, I have applied for roles at Deloitte where I have been invited for interviews and they are asking me questions that I am finding difficult to answer. I don't think my accounting skills are going to land me a role in finance... Do I need to switch to another

accounting stream? If you want to study accountancy, you'll need to switch to the ANZCA major. It's basically a combination of accounting and finance (no tax). If you want to switch to a "pure" finance major, you need to make a very good case that you want to become a "financial analyst". Obviously, it is very hard to get a finance role in a major accounting firm like Deloitte, but if you manage to get an interview, they usually ask for some substantial accounting knowledge. Your

chances of getting an interview are probably slim, but it's definitely worth a shot. The ANZCA major is the route to take. Reflections on a "first" Today marks a "first" for me. In the past year I've made so many changes in my life, and honestly I'm still not sure I've caught my breath. My best friend is moving out to Chicago, my boyfriend and I have chosen to live together, I've completed a semester away from my family and graduate school, and I'm working toward becoming a registered dietitian.

The purpose of this study was to evaluate the presence of hypointense lesions detected in the

supraspinatus muscle on STIR sequences and to correlate the hypointense lesions detected on STIR images with T2-weighted images, clinical history and electromyographic findings in the elderly population. Thirty-four symptomatic patients, aged 65 to 86 years (mean age 75.5 years), with shoulder complaints who were referred to our outpatient clinic were included in this study. STIR and T2-weighted images were obtained for each patient. The hypointense lesions on the STIR images

were compared with the T2-weighted images. The correlation between the hypointense lesions and the clinical history and electromyographic findings was evaluated. Of the 34 symptomatic patients, 29 (85.3%) had hypo-intense lesions on STIR images. Among these 29 patients, 21 (72.4%) had hypo-intense lesions in the supraspinatus muscle, 12 (41.4%) in the subscapularis muscle and 6 (20.7%) in both. All of the patients with hypo-intense lesions in the supraspinatus muscle

and all of the patients with hypointense lesions in both the supraspinatus and subscapularis muscles had a history of shoulder trauma. The number of hypointense lesions correlated with
