Review Score: 7.4 (7.4) Installs: 50,000,000 App size: 5MB Requires Android 2.0+ The Dropbox app is a great solution for storing your files locally and sharing files with friends or colleagues. The app lets you sync files between computers and mobile devices (via Wi-Fi or Internet). To ensure you keep your data safe, the app offers a master password function and lets you share folders and files with a select group of people. Plus, you can share files and folders privately without exposing them to the general public, by creating an access link. Creating a private link is easy. Simply create a sub-folder within the Dropbox folder and place the files you want to share. Right click on the folder and choose Share with Everyone or Share with Specific People. The new link will be generated and you can send it to anyone that needs access. There are many advantages to the app for security. First, the app can be set to encrypt your data before saving it. You can save a master password at the same time. No one else will be able to access your personal information if you lose your smartphone or if your mobile device is stolen. The Dropbox app will remind you to set a password. If you have a smartphone, you can also use the Share Sheet function to share folders and files with select people. To do this, access the Share Sheet, tap the Share sheet icon, select the folder you wish to share and then tap on the desired recipient. This function is important because not all accounts have the same limit on how many people you can share with.
