It is shown that in response to an external factor and after primary immunization with self antigen the magnitude of the reaction of the autoreactivity in the hemopoietic organs and the corresponding competence of the lymphoid cells are smaller than in the course of autoimmunization following the administration of the antigen in its native form and by the primary immunization with it. The time course of the proliferative activity of the lymphocytes and the ratio between their self- and foreign-antigen-reaction of the two main hemopoietic organs are different in the two types of autoimmunization. As a result the proliferative activity in the lymphocytes decreases quicker during autoimmunization following the administration of the antigen in the native form, while its maximum is recorded in animals with autoimmunization induced by primary immunization with self antigen. In response to the immunization the highest number of interrelation between the self- and foreign-antigen-reaction of the peripheral blood lymphocytes is observed in the animals with autoimmunization induced by the native antigen application.

Anisotropic soft-X-ray polarimetry of thin film samples by a bidirectional interferometer. We report the first successful implementation of bidirectional interferometry in soft-X-ray beamline optics and its use for measuring the anisotropic angular dependences of the reflectivity and transmittance of thin film samples. The polarimeter consists of a mirror pair and a crystal polarizer, the latter being either analyzer- or rotator-analyzer-polarized. The crystal must be aligned in the Bragg regime for high-resolution measurement. The all-reflective system is compatible with wavelength range from the visible to hard X-ray domains. The reliability of the complete setup is verified by measurements of the refractive index of fused silica and intrinsic aluminum. We demonstrate the capability of the instrument by the measurement of the dependence of the reflectance of MgF₂ on the azimuthal orientation of the crystal relative to the incident beam. The easy and fast integration with any existing two-port set-up makes it suitable for use in all laboratory-based beamlines. Landeck -

Image By Image is a straightforward software application that enables you to load AVI and WMV-formatted video files and view them frame by frame. It also offers support for MPEG, MP3, MPG and MPA files. The app can be paired up with a snapshot grabbing utility (e.g. ShareX, Greenshot, FastStone Capture) to capture movie frames and save them as images, for example. It doesn't require setup. Portability perks Provided that you have Windows Media Player installed, you don't need to set up anything else. This means that you can save Image By Image's program files anywhere on the HDD or on a pen drive and just click the executable to launch it on any PC. Unlike most installers, it doesn't change Windows registry settings. Load videos in a familiar interface Made from a small window that resembles Windows Media Player, the interface shouldn't present any kind of issues for any user familiarized with the well-known Microsoft tool. After opening a media file, you can use basic controls to pause and resume playback, adjust the volume level and play speed, enter full-screen mode, or seek a particular position within the stream. View the video frame by frame The tool lets you toggle frame-by-frame and normal play mode, click two buttons to view the previous or next frame, change the default step, as well as jump to a particular position in the movie by entering the time mark. Unfortunately, Image By Image doesn't have a built-in function for grabbing screenshots and saving them to file. Evaluation and conclusion We haven't come across any stability issues in our tests, thanks to the fact that the program didn't hang, crash or display error messages. It left a small footprint on system resources consumption, running on low CPU and RAM. Although it doesn't come packed with additional options, Image By Image offers a fast and simple solution to viewing video files frame by frame, and it can be handled by all user levels. Plus, it's freeware.1. Field of the Invention The present invention relates to a computerized system and method that matches offers to services for the benefit of a company. 2. Description of the Related Art In marketing, the ability to match desired offers with desired services is extremely valuable. For example, it is important that advertisers know whether a particular offer, such as a TV commercial, is likely to result in an up-sell of the advertiser's product or
