The Bottom Line Monitoring security cameras involves a lot of work. Security system manufacturers make it harder and harder to browse and review images captured by the cameras. The software can make everything much easier to manage, providing a convenient navigation panel and options for configuring settings. The software is capable of making automatic adjustments to daylight settings, enabling you to create a picture of the outside environment. It's possible to use the program to monitor the cameras from a number of different locations, including your Android smartphone. The number of cameras and the panel

size can be defined with ease. Also, the app can be used to improve your camera's functionality, letting you set the video resolution, red-eye reduction and zoom level. The program displays images and recordings taken with the cameras, without the need to connect with the device or view them directly on the screen. You can watch live recordings and images without any difficulties. Another benefit of this app is that you can view images and recordings, while providing a number of playback controls. Due to the program's straightforward and user-friendly features, it's suitable for an individual who wants to use a camera security system. Camera Viewer Pro Installation: Download – Camera Viewer Pro EXPLORE ON

About: Camera Viewer Pro is a nice app that turns the PC into a video surveillance system and allows you to easily detect motion around the home. The system enables you to capture, storage and playback any images. The program works with multiple USB webcams and Axis Internet Protocol cameras (or IP). Depending on the number of cameras connected to the system, you can view them in panels of various sizes. Furthermore, if you want to view a more detailed image of what is happening outside, it can be set to full screen. When you add a new camera to the system, various details need to be provided, such as the device type, display fonts, image resolution and working schedule.

Furthermore, it's possible to enable motion detection and fiddle with several FTP settings (File Transfer Protocol). Recordings can be kept on the computer for a number of days before they are automatically deleted. An output directory can be set for this app. As mentioned, the program lets you view any recordings, while providing several playback buttons, as well as tools for

What's New In Camera Viewer Pro?

Camera Viewer Pro is an easy-to-use, free photo surveillance solution that can work with any Windows 7 PC. With this surveillance software, you can easily upload the pictures captured by your USB camera to your home network, view and edit the

stored pictures, print them, record your movie clips, compare multiple images, and even create a timeline of the video events. A high-resolution webcam is not required, since this program will automatically resize the images to fit on your monitor. It will automatically detect and set the video quality of your camera on startup, so you'll be able to quickly switch between resolutions even if you have a high-resolution camera and monitor. Once you have set the quality, all the new pictures will be set to that resolution. Just a few clicks are needed to start and stop recording to a file, and the last picture recorded will be automatically saved as a movie clip. Moreover, you can easily set the volume of the camera recording to sound like a regular webcam (via an

embedded microphone). With Camera Viewer you are able to store a series of images, which are given a date and time stamp. You can also add an unlimited number of folders to view the images and add sub-folders and files inside them. You can also create timelapse movies which will automatically loop. You'll be able to get detailed information on the recorded images, e.g. the date and time they were taken, the resolution, file size and number of colors. To start viewing images in the program, just double-click on one of the stored images. You can then use the "zoom" tool to magnify the image up to your liking. You can also remove pictures you don't want to see, and drag them to any of the designated panels in the program. You will then be able to

rearrange the pictures as you like. Camera Viewer will also tell you the exact amount of storage space used. There is no limit to how many pictures or videos you can store, and they'll be automatically deleted once they are two weeks old. Of course, they can be restored from the last backup if required. To set up the program, you can choose from a wide array of video and audio settings. You can use the built-in webcam, your computer's webcam or the one embedded in your USB camera. To get an idea of the quality of your camera, Camera Viewer will display

System Requirements For Camera Viewer Pro:
