You make stuff up based on your family. Just because your dad was a govt official does not make him a hero. If you wanna talk about youtube heroes maybe start with Miley cyrus, Hannah, Christina, or The Bang Bros, and even the queen herself, the list is long. I say we make a stop in Atlanta and slap Joey for being a retard and answer the stupid things he keeps asking about in the vain hope of him showing some sort of growth. You are obviously a jealous celebrity who has no personal accomplishments but seeks to make up for your

own short comings. What do YOU do? WHAT DO YOU DO Joe? Sebastian Vettel has admitted Ferrari could be facing its 'worst' nightmare next year after a near-miss in qualifying yesterday. The Italian team spent long periods in the final part of Q3 in the hands of both Fernando Alonso and Felipe Massa before the former ended with a grid slot after last year's pole. Vettel is starting from the front row tomorrow with teammate Fernando Alonso alongside for Ferrari - and he admits the pressure is mounting on him. "I think we're facing our worst nightmare," the German said after qualifying. "We want to do a good job but the car is not at its best. We should do a good job but we have to bear in mind that we are not at our best. It's clear that we're not where we want to be. But as in any race, we know we have a strong car." Ferrari has made a solid start to the season, and Vettel believes that is down to the organization of the team. "We are turning on the mark we

I need to modify the CKEditor so that the Browse button is disabled when in the JavaScript View. Is there a simple way to disable the Browse button when browsing? I've found a plugin that allows for custom

buttons but was wondering if there was an option to disable it. A: I don't think so. But the last version was available for free, so perhaps this helps you: Q: When should I encrypt my home directory? I would like to create an encrypted directory for files that will not be altered, as I plan to use it for backups. I have a concern about two use-cases: If my files get altered (even accidentally), I could still revert the modifications (of course, I would have been able to do that with a properly encrypted directory all along). If my files get copied (by some external application, for example), the whole directory could be silently overwritten, if this was the job of the external application. So far, when I've encrypted the whole of my home directory, I haven't used any of my documents - it was just a test, so I could have decided to end up with lots of encrypted files - but I would rather not. Can I be confident that all home directories encryption schemes won't help me here? Or do the problems I pointed out also apply in this case? A: You should always encrypt the home directory.
