A: $\sin^6 x \cos^6 x = \frac{1}{4} \sin(6x) + \frac{3}{4} \sin(4x)$ $\sin x \cos x = \sin(x + \frac{\pi}{2}) \cos(x - \frac{\pi}{2}) \rightarrow \sin(\frac{\pi}{2} + x) \cos(\frac{\pi}{2} - x) = \sin x \cos x$

Q: How do I convert a date variable from character to date format? As a newbie and a new user to Stackoverflow, I found your website to be very helpful and informative. I am, however, having a problem with an R Markdown/knitr document. When I knit it, the input file I created has a date variable in it as a character. The desired output is a dataframe with 3 columns that have dates which were saved as characters in the input file. My current error message is "Error in data.frame(Date = as.Date(c(1,...), origin = "1899-12-30"), ID = c(1, 1, : 'origin' must be supplied" I am still not totally confident with the code to convert the input file as I have only been coding for 3 weeks, so I'd really appreciate some guidance. Please see my R code for this problem below: title = "Assessment of Insecticides On Mosquito House Biting" source("_assessment.R") comment1 = "Development of a model for control of mosquito house biting" type = "markdown" #' @include code_book.Rd There is a lot of more coding I have done this is just a part of it. The code below is simply the part that is causing my error. #Assessment of Insecticides On Mosquito House Biting #Source: Knitr_project. #' @description #' This function plots a treemap. And that, ladies and gentlemen, is how Shakespeare used his metaphors in "Henry VI" to tell his audience who the real villain of the play was. Poor, poor Richard. He is stricken by the bastard Edward's evil yelpings, but has the misfortune to speak the truth, and, as Henry IV called Richard II, bear witness against him. So he is villainized and hounded from court, pushed into exile and, when he is dead, executed. To show the English how bad a king Edward IV has been, Shakespeare roams the play's provinces, telling the story of how many noble Englishmen have been scorned, and some even killed. Thus, when Richard arrives in England's northern counties, he hears reports of that night when Henry VI was killed and Richard's brother Edmund was beheaded. In the early scenes, the dread Richard and his uncrowned Henry VI meet in the ruined cathedral at Wakefield where Richard is accused of illegitimacy and charged with high treason. Henry, still in his mother's clothes, makes it clear that Richard's son Edward IV, Edward's cousin, his false brother George, and George's wife Isabel were all bastard children fathered by Richard — and thus all have the same claim to the throne as Richard himself. When Richard is stoned and torn to pieces by the angry mob, his son Edward is in another part of the play, not out of cowardice, as has been suggested, but with a fine, clean conscience. Richard's bastard son, Richard, duke of York, is alive, and Edward is king. "The evil of us all lies in their obedience," Richard II declares, but that was exactly how Henry VI's sons viewed their grandfather. They saw him as a usurper, a usurping usurper who managed to buy his way back into power. So they fought to take it back from him. When they failed, they tried to take it away, and when they were still not succeeding, they murdered him. As for the king's evil son, whose legitimacy is the mystery that lies at the heart of the play, Shakespeare makes certain that the villainous Edward is firmly in control of the throne. The plot against the king ends up with Edward simply giving an order that Richard of York, the king's nephew and heir, be beheaded, and then declaring himself king. His father's claim to the throne is considered the most serious charge the king
