Java Install Maker With License Key Free Download

What's New in the Java Install Maker?

With this program you are able to create a setup package for your Java applications. With the help of Java Install Maker you can generate installers for Windows and Linux. It is possible to create a single standalone executable for each running OS, or packages with multiple files and optional program files in the directory for easy distribution. The software is portable and does not require additional installations. The resulting executable will include all standard files of the Java Runtime Environment and you are allowed to specify any custom settings as well. The whole process can be executed on a single computer, and the executable itself can also be taken with you on a removable data device. The following list contains all the features Java Install Maker provides and its main assets.

- Title Description** Java Install Maker With this software you are able to create a setup package for your Java applications.
- Clean GUI design** The interface is minimal and clean.
- Select the needed OS** It is possible to create a single standalone executable for each running OS, or packages with multiple files and optional program files in the directory for easy distribution.
- Dynamic menus and buttons** All the features and options can be easily accessed and set when needed.
- Custom.txt file** You can add your own set of instructions to the application.
- Distribution of all standard Java files** The package will include all standard Java files of the Java Runtime Environment.
- Customised icons** You can specify any custom icon you want to be included in the package.
- Useful buttons for all processes** You can create a setup package with advanced features in a few clicks.
- Textual interface for simple use** It is possible to create an installer for Windows and Linux, and the process itself is extremely easy to use.
- Customization of all options** You can change the output file name, welcome message and more.
- Multi-layer installers** You can choose to create a single standalone executable, or a package with multiple files.
- Use of HTML** The installer can be accompanied with a welcome message, as well as a number of buttons.
- Links to needed files** Your package will include a link to each file it includes, which makes it possible to retrieve the needed files instantly.
- Portable software** The installer can be taken along with the application, and doesn't leave anything on the hard drive once it is no longer needed.
