Bit depth: 32bit 64 bit.Â .The present invention relates to a traffic light controller for controlling traffic lights. Many countries have established road traffic signals to regulate the flow of traffic on streets and intersections. These traffic signals are either analog or digital. An analog signal consists of a light and an audible signal. The light turns from red to green and the sound signal changes. A digital signal usually consists of a light and a numeric display. The light is usually amber and turns yellow. The display changes from xe2x80x9cNxe2x80x9d to xe2x80x9cYxe2x80x9d. The xe2x80x9cYxe2x80x9d
