* Web Hosting Application: In addition to Photoshop, several other web-hosting applications such as Dreamweaver are available to share online. Dreamweaver offers a variety of web-page creation, editing, and sharing tools that users can use to create web pages. Before getting more into the specifics of creating your own web pages, you need to know how to use the two main programs: Photoshop and Dreamweaver. Dreamweaver offers many more features and is designed for the creation of web pages. Users must purchase a small subscription to Dreamweaver to use it online. In this book, I discuss both Photoshop and Dreamweaver in detail and provide full tutorials to show how to achieve specific tasks. So how do you start a web page? First, you must determine what you want to do, such as creating a web page with a background, creating a specialized page, or starting with a sample page that you have in mind. Once you have decided, you can begin creating your page. For now, however, let's look at how to begin in Photoshop. # **Creating Web Pages** To begin creating a web page, you must create a new document and save it as a psd file. For this exercise, I will create a page with a blue background. **NOTE** : Web pages are saved as a Portable Document File (psd). The psd file is now the format, so if you convert the file to a web-page format, the original file will not appear unless you delete the psd file from your hard disk. So always save a psd file and open a web page in a program that supports the psd format. In my example, I am using a square template I created earlier. Using the Rectangular Marquee Tool, I select the background area and drag it onto the page. I place the left corner of the background on the page, and then I drag from the top of the page to the bottom and release. I drag from the right side of the page to the left and release. Now I have a blue background behind the content area of the page. You can see that the blue color is highlighted by the Rectangle Select Tool in a rectangle that covers the entire page. To apply the color, you need to select it and choose Edit⇒Fill. The color is automatically applied to the entire background. When you select the color, Photoshop asks you for a color

An ethical hacker, also known as a "white hat," obtains the private information of many businesses and is responsible for revealing these secrets to the media. In the gaming industry, these hackers earn a living by convincing companies that their has-been games are still playable. And, as if that weren't enough, they also provide the companies with lessons on how to better secure their software. Recently, in the news, we have seen both Sony and Microsoft (along with Nintendo and several other companies) attacked for their alleged love of doing business with unethical hackers. All of these companies are now scrambling to fix whatever holes, flaws and vulnerabilities that can be used to gain access to these companies' confidential data. So, what can you do to protect yourself? Here are some tips on how to avoid being a target of an unethical hacker: Always sign-in to your new accounts and games on an untrusted device, such as your neighbor's computer. Never download an unknown application from your computer or from the Internet. If the download isn't "trusted" (e.g. from the Windows Update website) then the program may include a trojan (the dangerous computer code that allows hackers to remote-access your computer). Never provide your personal information, such as your Social Security Number, your credit card numbers or a complete list of your bank account information.International Home Welcome to FachRückkehr.org, the European and German language website about migrants' return to Germany. The goal of the website is to inform people about the problems migrants returnees face. At the same time, the site wants to raise awareness for the benefits of migrants' return. The site collects a variety of articles about migration, multiculturalism, migration policy and integration, and their impact on the German welfare system. This content is produced by the German Association of Returnees (DEFA) on a voluntary basis and supported by the German Ministry of the Interior. The site contains links to international language summaries on return, information on German support organisations, and important announcements about events and initiatives. Our missions is to inform people of the right to return for all European migrant returnees and to raise awareness on the difference in processes and challenges to return of 'new' and 'old' returnees. We represent 'new' returnees for anyone who has spent more than one year in Germany, so not only

Q: Is there a way to take an existing project and export to Game Maker Studio with custom graphics and assets? Is there a way to take an existing project (in ActionScript3 or flash) and export to Game Maker Studio, with customized graphics and custom assets, and then import it to another project? I think this could be done by converting the original project into a game maker project, adding the assets (art, music) and using an auto-import option to get all the required projects into a certain directory. Is there an existing tool to do that? A: This is possible if you use an asset packer, such as: Asset Packer ArtPack FimFramework for *P. aeruginosa* at an e-waste recovery site at the Guiyu District, China. Total DNA was extracted and measured on a Qubit 2.0 fluorometer with a high sensitivity kit (Thermo Fisher Scientific, Inc., Waltham, MA, USA). Promoter-probe pairs were amplified with pairs of primers (Additional file [1](#MOESM1){ref-type="media"}: Table S1) containing *Pst*I restriction site at the forward primers, and *Apa*I site in the reverse primers. Two sets of primers were used for *mexG*, *mexF*, *mexE*, *mexJ*, *mexY*, *mexZ* genes because the previous study suggested that these genes were transcribed in multiple gene clusters \[[@CR46]\]. The *gfp* and *rpsL* genes were amplified as internal standards. For *P. aeruginosa* ATCC27853, primers were designed to differentiate the transposon mutant PAO1Δ*lasI* from the wild type strain \[[@CR47]\]. The amplicons were purified and digested with corresponding restriction enzymes at 37 °C for 3 h and then subjected to capillary electrophoresis on an ABI 3500xL genetic analyzer (Life Technologies, Waltham, MA, USA) for fragment analysis. Data analysis {#Sec17} ------------ The peak areas of the respective quantifier PCR (qPCR) products were determined using MxPro QPCR software (Agilent Technologies
