## WinLib Uninstall Manager PC/Windows

WinLib Uninstall Manager was developed by software developer Softmink Computer. It can be considered a lightweight and user friendly tool for uninstalling applications that you may have already installed on your computer. No matter if you use Windows 98 or Windows 2000 or Windows XP, the utility will uninstall all programs that you don't want to keep on your computer. It works with all Windows versions including Windows NT, Windows 2000, Windows XP, Windows Server and Windows Vista. The interface is simple and intuitive. You just need to choose the program you want to uninstall, and set the location of its uninstall file. You can also leave the "Reverse" option enabled, if you want Uninstall Manager to create an uninstall file for any program it finds. Otherwise, it will only remove the file related to the program you are uninstalling. The utility includes a scan of the computer for all running programs and all installed programs. Once the list has been sorted and displayed in the main panel, you can click a program to launch the uninstall tool, or just select the program and click the "Clean!" button. All the files that can be found in the uninstall file will be found and removed from the computer by the tool. The utility works with all programs, whether they belong to a "systemwide" installer or are not included in the "Add/Remove Programs" list. The results of the uninstall operation will be displayed in a list. There you can easily control the speed at which the program is removed. If the uninstall is in progress, you can cancel it at any time. The uninstaller will work silently. It does not prompt messages, will not write any log files and will not leave any traces of the uninstall operation behind. Because it is a Windows helper utility, you can also remove all related files, even if they have been restored from Windows' auto-restore feature. The tool uses the Windows API to unpack all program data from the "C:\Program Files" folder and all sub-folders. You can also disable the utility if you want.
