Category:Embedded Linux distributionsQ: How can I make my MAC both a normal computer and a terminal? Background My Mac is running Snow Leopard. I normally use it for my development work and want to be able to access it from both the command line (say for phpmyadmin) and from within Eclipse IDE. Problem The Mac Pro does not have any card readers (except for the Firewire port). Question How can I best make the Mac Pro able to use the adapters that I already have (e.g. Airport card)? If it does not support it natively, how can I get around it? A: He also has the same issues. He found a solution on this page for the software: A: For a Mac Pro, I'd do this: Go to Disk Utility. Delete the EFI and Apple partitions. Repartition your internal drive with the Mac OS Extended (Journaled) formats. Install Snow Leopard. Go back to Disk Utility and reinstall the EFI and Apple partitions. Boot from an external USB DVD drive. Start Disk Utility. Join an installation server to start Snow Leopard. Install on the internal drive. Note that you can now boot an external drive or USB dongle and have a Mac that acts as a terminal. A: I just added a USB 2.0 Card Reader to a Mac Pro and found this site pretty useful for setting up a custom keyboard command that switched between the external USB card reader and internal usb 2.0 ports. The keyboard event is: ALT Q : Show or switch USB Keyboor Bus support on/off So to switch between
