Getting Started with BASIC - Game Maker Studio - Review by: MaxiowsGreat IDE Simple, Engaging in the first programming language ever created, BASIC has its focus on ease of use and is still suitable to create applications and games. What's more, modern programs such as Just BASIC are equipped with features that enhance the whole experience, with syntax highlighting, builders, debuggers and more. Simple interface makes it easy to use At a first look, everything seems in its place, with the majority of space representing the text input area, while the upper toolbar holds all editing options and other functions you can trigger. What's missing though, is a line numbering feature, which cuts off a great deal of practicality because it makes it difficult to track your code. Load examples or existing projects Input is pretty much done like in every other programming language or text editor. You need some degree of knowledge so that your lines of code can be bundled up in a fully-functional application. Luckily, there are several examples you can load and practice on, and with the help of an integrated syntax highlighter you can easily identify functions and variables. If you decide to use the application for projects you already started, these can be inserted or loaded directly, given that they are found under the BAS format.

Additionally, plain TXT files are also amongst the supported formats and can be imported in any project. The same goes for saving or exporting your work. Test the code and build the app Since you get to work with a lot of text, sooner or later you might want to quickly find bits of code or specific words. This is possible with the search tool, which is also equipped with options to replace all matching entries with custom input. When finished, the application is capable of piling up your lines of code in

a TKN file, which is BASIC's way of creating executables. There's also a "Run" command to test out the project before deployment. For more issue tracking, you can use the built-in debugger to see whether or not you made any

Experience a truly digital home studio in your pocket You can choose your software right from your wrist, with an incredible set of features: tracks, beats and loops in the music studio; indoor and outdoor location setups in the photography studio; timestamped recordings in the video studio; and more... You can create your own tracks, loops, sounds and photos with Just Music and Just Photo and then add to them with real-time audio and visual effects, or use the included Editor tools. You can even play, edit and share your mixes online in just a few taps. What's more, you can use just one app to create all your music, pictures and video, with our music and photo editors loading sounds and photos from your phone and tablet so you can play them back and edit them directly on the application. Every app offers real-time control over real-time audio and video, so you can run your projects wherever you are: in the music studio, on an outdoor location setup, even in a car. Create your own photos or videos with just one app Ever thought you could create your own photos or videos with just one app? You can now. The best photo and video apps around have just been brought together to create one complete system so you can create, edit and share photo and videos right from your wrist. Just Photo is all about natural light photo creation, and has just been upgraded to support features of your favorite photo editing apps, like Instagram and Snapchat. Just Photo lets you create stunning photos by adjusting the basic exposure and white balance on the fly, with a choice of filters, frames, effects, borders and more. Plus, it has a built-in editor that loads your photos from your phone. Just Photo even adds dual-lens controls, with auto exposure locked with your chosen lens and focus control, so you can make sure you're always in the right light. Build your own music and video tracks from scratch Track your favorite songs using real-time audio and when you're ready, add your own vocals, instruments, effects and beats and create your own original tracks. Just Music lets you edit your music right from your wrist, with instrument presets, effects, layers and the possibility to sync live for best results. With Just Music, you can add layers like drums, synths, background vocals and more, and instantly mix and even sync live to get the most from your music. Now with Just Photos, you can b7e8fdf5c8

For tasks such as uploading your music collection, managing your digital media, keeping track of the shows you stream or watching on your Android phone, YouTube is the first choice. Now it seems like the YouTube app also offers a few more useful features in its latest version: "Truematic". What is that? You probably know the app from your Android phone or tablet and its ability to send messages through the Wi-Fi connection. Well, that's what you get from the new version. It uses the truematic Web API, allowing you to send a message through the search bar and tap and hold the mic to record a voice message. If you like, it can be turned on and recorded by tapping on the mic and holding the right button. The microphone then accepts voice commands and plays them back. This is done through web requests. So, for example, if you type "play" into the search bar, the system will search for a YouTube video and play it right away. The Truematic app works with an API KEY, which you need to get and put it into the app. Truematic works with many services, but it's not tied to the YouTube app at all. Thus, the user can also send a message through Facebook Messenger or simply through the phone network. Truematic was first launched about a year ago, when Google bought the California-based company Roli. Join the development team of the hottest project: COBOL Zombie 1.0: The Living Dead Codebase.
