New research has found that the rate of cannabis overdose deaths in the UK has now surpassed the rate of alcohol overdose deaths. Dr Elmo Salazar, lead author of the study and a senior health policy researcher at the University of Edinburgh, noted in the Guardian that although the rate of cannabis overdose deaths in the UK had been decreasing, the rate in 2018 was back to the same level as in 2004, before the peak of cannabis deaths in the UK. The study, published in the journal Addiction, used data from 2004-2018, which included a total of seven million deaths from

poisoning in England and Wales. The researchers also found that fatal cannabis overdose rates have increased for British males over the past three years and cannabis-related deaths have increased for all age groups. Salazar told HuffPost UK that the huge increase in fatal overdoses in people aged 14 to 24 years could be due to "episodic use which may be more common in that age group". "More research is needed to fully understand these trends," he added. The study found: In 2018, there were 6,777 opioid overdose deaths and 15,244 deaths due to cannabis overdose in England and Wales, a difference of 9,467 deaths. In 2018, there were 868

opioid overdose deaths and 1,825 due to cannabis overdose in Northern Ireland. Deaths due to cannabis overdose have fallen significantly in the UK. In 2004, there were 5,778 cannabis overdose deaths. In 2018, there were 3,499. By 2018, the decrease in cannabis overdose deaths in England and Wales was no longer statistically significant. Cannabis consumption had increased in all age groups between 2004 and 2018, but the greatest increase was for people aged 15 to 24. The increase in cannabis overdose deaths in the UK represents a significant new public health problem. The study states: "There is a pressing need for more effective suicide prevention

strategies and improved cannabis harm reduction approaches in the UK."This is an archived article and the information in the article may be outdated. The present invention relates to a carding machine which has a traveling

and driving mechanism disposed on a working frame, together with a bunching mechanism and bunching shaft, a plurality of carding drums mounted to the working frame, a plurality of cylinders, and a plurality of carding belts, and a method of the carding machine. Generally, in the process of processing vegetative material such as fiber material and pulp material, a carding machine which forms a sliver or the like from the processed material has a mechanism which is capable of independently performing a bunching step, a false-twist step, a crimping step, and a curving step, and the bunching step, false-twist step, and crimping step

are effected after the bunching step. FIG. 2 is a schematic view illustrating an arrangement of a conventional carding machine, FIG. 3 is an explanatory view illustrating a bunching mechanism of the carding machine, and FIG. 4 is a front view illustrating the arrangement of the bunching mechanism. In FIG. 2, reference numeral 1 denotes a working frame; 2 denotes a bunching shaft; 3 denotes a bunching mechanism having a plural of elements, such as a bunching duct 3a, a bunching roller 3b, a bunching post 3c, a bunching grid 3d, a bunching hopper 3e, a bunching suction pipe 3f, and the like, which are arranged so that they can be moved freely, and which are

pivotally supported on the working frame 1; 4 denotes a bunching cylinder which is driven rotationally by a motor (not illustrated); 5 denotes a bunching shaft supported by a plurality of bearings, 6 denotes a sliver guide plate formed of a metal material, which is installed at an end of the working frame 1; 7 denotes a sliver guide plate constituted of a polymer material, which is installed at an end of the working frame 1; 8 denotes a finish roller rotatable by means of a motor (not illustrated), which is disposed at an end of the working frame 1, by means of which both end portions of the sliver guide plate 7 and of the sliver guide

plate 6 are supported, and which is provided with a metal material, or a metal material with rubber pressed onto the metal material; 9 denotes a belt-crimping roller which is integrally formed with the sliver guide plate 6; 10 denotes a sliver guide rod installed at an end of the working frame
