To use the instructions that follow, you'll need a copy of Photoshop Elements. However, you can use the free, open source GIMP to change photographs. Finding your way around Photoshop's interface After setting the stage for how Photoshop operates, this section covers the Photoshop interface. You can find many other books that walk you through Photoshop Elements (and GIMP) in great detail. Because Photoshop is such a large program, you may want to read other books before you work through this one. If you're new to photo editing, you may just want to dive into learning the program, regardless of what version you have, and work your way through the interface. You can get up and running quickly by using the layers you see in any photo editing program. We discuss how to work with layers in Book III Chapter 2. You can find detailed explanations of layers, including how they work and how to apply gradients and other effects, in Books I and II Chapter 7. Your Photoshop Elements distribution comes with most, if not all, of the tools you see in Figure 2-2. See the box "Working with the Elements menu," later in this chapter, for instructions on how to add more tools and buttons to your toolbox. Tool Options and Button Collections You have some control over the functions of a tool with three options in the Options bar. When a tool is selected, a small down arrow appears next to the tool's name in the toolbox. Move the cursor over that arrow, and you see a pop-up menu that gives

Q: Django: "When using multi-language support, please write your template lookups in the local language" error I'm trying to work with python's 'locale' module and am getting the above error whenever I try to use {{ mystring }} in a template file. The only solution I know is to replace {{ mystring }} with something in the language I'd like to use, like: hello: {{ message_hello }} But where do I find/replace {{ message_hello }}? Here is an example of how it could be used for yours: The utilization of remote access communications systems continues to increase. This increased utilization has substantially increased the number and types of remotely-accessed users. Many businesses have a need to permit individuals to access and control the applications used by the business from remote locations, including their homes. One such communication system that enables a remote user to control the applications used by his or her local communications device is the telephony-to-computer communication system. This telephony-to-computer communication system provides the interconnection capability for connecting one or more telephony network devices, such as telephones, to computer devices, such as personal computers, through a telephony network.
