"HyperMotion Technology enables complex, realistic interactions between the player and the game world," states Michael Volland, FIFA's Director of Gameplay Innovation. "Players take the ball into other players and they react appropriately to realistic player movement and reactions. Working closely with our partners, we have designed several advanced interaction systems, including the ability to pause the game world while the ball is still moving during a free kick, and players can dive to make the perfect header." "This is a new dimension for FIFA, in particular, with more complex interaction, a more realistic and data-driven gameplay, and greater accuracy and player likeness," said Joseph Alexander, FIFA franchise director. "It's one of the most complete games we've ever made in terms of the kinds of gameplay that are possible." Read More The 2017 FIFA World Cup will be the first time FIFA has launched two games at once. FIFA 18 launched last month and FIFA 21 has been available for pre-order since February, with its official release date in just over a month on July 17. FIFA 21 also has more than 50 new clubs to play for in the English, French and Spanish leagues, including the Aston Villa, Leicester City and AS Roma. Check out our FIFA 21 hands-on The promised upcoming Play First Edition is due to go live in August with additional content including new leagues, custom-built player archetypes and a collection of a dozen new transfer-based events. The new Play First Edition content will also coincide with the launch of FIFA Ultimate Team Mode, which we'll be covering in more detail next week. Sex variation of the oral submucous fibrosis-related parameters. The incidence of oral submucous fibrosis (OSMF) is more common in males. The sex variation in OSMF is however less studied. To evaluate the effect of sex on the incidence, distribution of signs and symptoms of OSMF, pattern of healing, and recurrence rate. The case series study included 80 patients with histopathologically proven OSMF. The healing pattern and recurrence rate were evaluated for sex. Association of sex with other variables like age, habit of smoking, duration of disease, diet, use of tobacco/betel quid, and alcohol was also evaluated. The male/female ratio was 3.8:1. Mean age of males and females was 37.05 +/- 7.8 years and 40.
